OVERVIEW

Kota Stone Wall Cladding — Architectural Stone for Every Surface

Kota Stone wall cladding transforms ordinary walls into permanent architectural statements. Cut into lightweight 10–12 mm thin slab panels, Kota Stone can be applied to interior and exterior walls using standard tile adhesive — creating dramatic visual effects that range from sleek contemporary feature walls to richly textured rustic facade treatments.

The natural blue-green and brown tones of Kota Stone bring warmth, depth, and organic beauty to spaces that would otherwise feel cold or clinical. In high-end hospitality design, corporate architecture, luxury retail, and premium residential interiors, Kota Stone cladding instantly signals quality, permanence, and premium brand positioning.

On building exteriors, Kota Stone cladding serves a dual function — enhancing the building's aesthetic character while simultaneously providing weather protection and thermal insulation. The dense limestone panels act as a protective skin that improves the thermal performance of the underlying wall structure and extends the building's exterior maintenance intervals significantly.

10–12 mm Panel Thickness	Any Wall Surface	Inside/Out t Interior & Exterior	Dual Aesthetic & Protective

KEY ADVANTAGES

Why Kota Stone Outperforms Alternatives

■ Architectural Focal Points

Stone cladding instantly transforms a plain wall into the architectural focal point of any room — commanding attention and communicating permanence, quality, and premium design intent.

■ Lightweight Thin Panels

At 10–12 mm thickness and 26–32 kg/m², the panels are structurally much lighter than full-thickness stone — suitable for lightweight walls, upper floors, and retrofitting existing buildings.

■ Thermal Insulation Benefit

Applied to exterior facades, Kota Stone panels provide meaningful thermal mass that moderates daily temperature swings — reducing building heating and cooling loads by 8–12% in Indian conditions.

◆ Weather & Moisture Barrier

Kota Stone's low porosity (<0.5% absorption) makes it resistant to moisture penetration, salt attack, biological growth, and UV degradation on external building facades.

▲ Full Finish Range

All six surface finishes are available for cladding — from mirror-polished feature walls and contemporary honed panels to rustic natural and tactile leather surfaces.

■ Simple Installation System

Applied with standard C2 flexible tile adhesive using the same installation method as large-format ceramic tiles — accessible to any experienced tiling contractor.

TECHNICAL SPECIFICATIONS

Product Selection Guide

Specification	Value	Notes
Panel Thickness	10–12 mm	Standard cladding panels
Panel Weight	26–32 kg/m ²	Structural check for upper floors
Standard Panel Sizes	300x600 mm	Custom lengths available
Available Finishes	All Six Finishes	Polished to Sandblasted
Adhesive Type	C2 Flexible Tile Adhesive	BS EN 12004 compliant
Joint Width — Interior	2–3 mm	Matching grout colour
Joint Width — Exterior	3–5 mm	Flexible weatherproof grout
Frost Resistance	Yes — Class F4	External use approved
Sealer (Interior)	Optional — Penetrating	For stain-prone areas
Sealer (Exterior)	Recommended — Breathable	Annual inspection advised

PROJECT TYPES

Where We Supply

■ Residential Feature Walls

Behind sofas, at bed heads, in dining rooms, and in entrance foyers — Kota Stone feature walls create the most dramatic interior focal points available to residential designers.

■ Hospitality & Restaurant Design

Hotel lobby walls, restaurant interiors, bar back panels, and boutique hotel corridors — Kota Stone cladding creates a distinctive, memorable spatial character for hospitality venues.

■ Commercial Building Facades

Office building exterior cladding in natural Kota Stone projects a prestigious, architecturally considered image that outlasts paint or render by decades with minimal maintenance.

◆ Luxury Retail Environments

Premium retail flagship stores, jewellery boutiques, and luxury brand showrooms use Kota Stone cladding as a brand signature — communicating quality, durability, and premium positioning.

▲ Heritage & Government Facades

Government buildings, educational institutions, civic facilities, and heritage conservation projects specify Kota Stone cladding for authentic character and minimal lifetime maintenance cost.

■ Bathroom & Spa Interior Walls

Full-height Kota Stone wall cladding in bathrooms and spas creates a luxurious wellness environment — cool to the touch, naturally moisture-resistant, and organically beautiful.
