ABOUT THIS PRODUCT

What is Natural Finish Kota Stone?

Natural Finish Kota Stone is the stone in its most authentic form — with the original quarried surface preserved after minimal processing. The stone is cut to dimension and edges are dressed, but the top face retains its natural undulations, quarry texture, and unique surface variations that give each piece an organic, one-of-a-kind character that no manufactured tile can replicate.

This is the most traditional and most widely used form of Kota Stone across India, especially for outdoor applications where its naturally very high anti-slip rating and exceptional all-weather performance are critical safety and durability requirements. It is the recommended finish for any exposed outdoor surface.

Natural finish is also the most economical option due to minimal processing requirements — making it the ideal choice for large-scale infrastructure projects, housing schemes, temple construction, educational institution campuses, and budget-conscious builders who refuse to compromise on material quality.

R12 Outdoor Slip Resistance	Zero Processing Chemicals	Most Cost- Effective	50+ Year Service Life
---------------------------------------	-------------------------------------	--------------------------------	---------------------------------

KEY FEATURES & BENEFITS

Why Professionals Choose This Stone

■ Authentic Quarried Surface

The preserved natural texture gives each installation genuine organic character — subtle undulations, natural texture variation, and honest stone character that evolves beautifully with age.

■ Maximum Anti-Slip Performance

R12 outdoor slip resistance — the highest rating for any Kota Stone finish. The natural surface undulation provides a truly secure footing in monsoon rain, frost, and wet conditions.

■ All-Weather Durability

Handles India's extreme seasonal range — intense monsoon rain, 45°C+ summer heat, and winter frost — without surface degradation, colour fade, spalling, or loss of performance.

◆ Most Cost-Effective Option

Minimal processing requirements make natural finish the most economical Kota Stone option. Ideal for large-area projects, infrastructure, and volume-sensitive construction budgets.

▲ Smallest Environmental Footprint

Zero chemical processing, zero grinding compounds, zero synthetic treatments. The most environmentally responsible form of Kota Stone with the smallest embodied carbon footprint.

■ Virtually Zero Maintenance

Requires no special sealants, no polishing, no periodic treatments. Occasional sweeping and hosing is all that's needed to maintain natural finish stone in perfect condition for decades.

TECHNICAL SPECIFICATIONS

Physical & Mechanical Properties

Property	Value	Standard
Finish Classification	Natural Quarried Surface	—
Surface Character	Natural Undulations & Texture	—
Slip Resistance	R12 (Outdoor)	DIN 51130
Water Absorption	< 0.5%	IS 1124
Compressive Strength	≥ 70 MPa	IS 1121
UV Colour Stability	Excellent — No Fade	—
Frost Resistance	Class F4	EN 12371
Maintenance Sealer	Optional — Not Required	—
Recommended Environment	Outdoor & Industrial	—

Available Sizes

- 600 × 600 mm — Standard Module
- 300 × 600 mm — Plank Format
- 400 × 400 mm — Classic Square
- 900 × 300 mm — Stair Tread
- Custom Cut — Any Dimension

Thickness Options

- 20 mm — Standard Outdoor Flooring
- 25 mm — Pathway & Open Terrace
- 30 mm — Parking & Driveway
- 40–50 mm — Stair Treads (Structural)
- 75 mm — Kerb & Coping Stones

IDEAL APPLICATIONS

Project Types & Use Cases

■ Open Terraces & Rooftops

The R12 anti-slip texture and outstanding weather resistance make natural finish Kota Stone the gold standard for exposed rooftop terraces and open sun decks.

■ Garden & Landscape Pathways

Creates beautiful, naturalistic garden paths and stepping stone layouts that blend harmoniously with lawns, planted borders, and natural water features.

■ Temples & Heritage Sites

The authentic natural surface aligns visually and culturally with traditional Indian sacred architecture. Used in thousands of temples across Rajasthan, Gujarat, and Madhya Pradesh.

◆ Industrial & Factory Floors

The rough natural texture provides R12 slip resistance in factories, loading docks, chemical processing areas, and storage facilities where wet floor safety is critical.

▲ Driveways & Parking Areas

At 25–30 mm, natural Kota Stone handles full vehicle loads including cars, SUVs, and light commercial vehicles — with anti-skid grip even on oily or muddy surfaces.

■ Government & Institutional

Schools, colleges, municipal buildings, government complexes, and public infrastructure rely on natural Kota Stone for its combination of durability, safety, and economy.

CARE & MAINTENANCE

Keeping Your Kota Stone in Perfect Condition

■ Routine Care

Sweep regularly with a stiff broom or blow clean with compressed air to remove loose grit. Wash with clean water using a hose or pressure washer 1–2 times per year.

■ Organic Growth

In shaded or damp areas, moss and algae may develop over time. Clean with a dilute solution of bleach (1:10) applied by brush, left for 30 minutes, then hosed off thoroughly.

■ Sealing

Sealing is optional for natural finish outdoors. If sealing for stain resistance (e.g., on terraces near cooking areas), use a breathable penetrating impregnator only — never a surface film sealer.

▲ Joint Care

Check and repoint joints every 5–7 years. Use a cement-based mortar for outdoor joints. Ensure proper drainage around the installation to prevent water pooling in joints.
